Estimated insert size: 4280; agarose-fp estimation
Estimated insert size: 36477; sum-of-contigs estimation
Quality coverage: 6.56 in 020 bases; agarose-fp estimation.
* NOTE: This is a "working draft' sequence. It currently
* consists of 6 contigs. The true order of the pleces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                     DNA linear HTG 03-JUL-2001
